Copy 3 of 7.
22 July 1957

MEMORANDUM FOR : Director of Operations
SUBJECT : Establishment of Procedures for Notifying Units
of Low Quality Film Resulting from Malfunctions
REFERENCE : Memo JAG to Ops, same subject, SAPG-17000, 24 June 57

1. In para. 3 of my memo to Ops (above reference) I suggested that in your meeting with HIAutomat you discuss the problem of getting information from Eastman and HTA back to the units so that the camera technicians can be made aware of any equipment malfunction.
2. [] indicates that our units are not getting this feedback of information which is absolutely essential. 50X1
3. I now request that you make a special effort to establish a fool-proof system which will assure timely and complete photo and elint mission feedback data being received by the proper gathering unit.
4. I suggest that Operations assume the responsibility for both the preparation of an appropriate feedback control system and for its proper functioning.
5. It might also be profitable to inform HIAutomat of any unit reports wherein camera malfunctions experienced are discussed in order that HIAutomat may be alert to check such malfunctions on the negatives. In this way they will be better prepared to give maximum assistance in the future in pointing out malfunctions for us to forward to the units.
6. I should like to hear your approach to this problem and see your proposed control system before it is finalized for distribution.
